Please find below and/or attached an Office communication concerning this application or proceeding.

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

DETAILED ACTION

The Office Action is in response to the Preliminary Amendment filed December 3, 2003. Claims 1-13 are pending and are subject to the restriction requirements set forth herein.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-3, drawn to a method of preparation of immunobiologically active drugs, classified in class 514, subclass 283.
- II. Claim 4, drawn to a method of homologous or eterologous transplantation of cellular culture of tissues comprising yohimbine, classified in class class 514, subclass 283.
- III. Claims 5-13, drawn to a method for stimulating the enhancement of immune response in a subject, classified in class class 514, subclass 283.

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions of Group I is drawn to a method of preparation of immunobiologically active drugs while the invention of Group II is drawn to a method of homologous or eterologous transplantation of cellular culture of tissues comprising yohimbine. Preparations of immunobiologically active drugs such as yohimbine are different from

Art Unit: 1617

methods of homologous or heterologous transplantation of cellular culture of tissues comprising yohimbine.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper. The searches in non-patent literature databases are extensive and do not overlap thus presenting a search burden to be searched together. In searching Group I, Examiner will be focusing on the patentability of the preparation of immunobiologically active drugs, and not the method of homologous or heterologous transplantation of cellular culture of tissues comprising yohimbine of Group II. Conversely, in searching Group II, Examiner will be focusing on the patentability of the method of homologous or heterologous transplantation of cellular culture of tissues comprising yohimbine and not the preparation of immunobiologically active drugs. Thus, Groups I and II have been appropriately restricted on the basis of being independent or distinct and presenting a search burden on the Examiner if they were to be searched together.

Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions of Group I is drawn to a method of preparation of immunobiologically active drugs while the invention of Group III is drawn to a method for stimulating the enhancement of immune response in a subject. Preparations of immunobiologically

Art Unit: 1617

active drugs such as yohimbine are different from methods for stimulating the enhancement of immune response.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group III, restriction for examination purposes as indicated is proper. The searches in non-patent literature databases are extensive and do not overlap thus presenting a search burden to be searched together. In searching Group I, Examiner will be focusing on the patentability of the preparation of immunobiologically active drugs, and not the method for stimulating the enhancement of immune response in a subject of Group III. Conversely, in searching Group III, Examiner will be focusing on the patentability of the method for stimulating the enhancement of immune response in a subject and not the preparation of immunobiologically active drugs. Thus, Groups I and III have been appropriately restricted on the basis of being independent or distinct and presenting a search burden on the Examiner if they were to be searched together.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions of Group II is drawn to a method of homologous or eterologous transplantation of cellular culture of tissues comprising yohimbine while the invention of Group III is drawn to a method for stimulating the enhancement of immune response in a subject. A method of homologous or eterologous transplantation of cellular culture of

Art Unit: 1617

tissues comprising yohimbine is different from methods for stimulating the enhancement of immune response.

Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper. The searches in non-patent literature databases are extensive and do not overlap thus presenting a search burden to be searched together. In searching Group II, Examiner will be focusing on the patentability of the method of homologous or eterologous transplantation of cellular culture of tissues comprising yohimbine, and not the method for stimulating the enhancement of immune response in a subject of Group III. Conversely, in searching Group III, Examiner will be focusing on the patentability of the method for stimulating the enhancement of immune response in a subject and not the method of homologous or eterologous transplantation of cellular culture of tissues comprising yohimbine. Thus, Groups II and III have been appropriately restricted on the basis of being independent or distinct and presenting a search burden on the Examiner if they were to be searched together.

Election

A telephone call to the attorney is not required where: 1) the restriction requirement is complex, 2) the application is being prosecuted pro se, or 3) the examiner knows from past experience that a telephone election will not be made (MPEP 812.01). Since the restriction election is considered complex, a call to the attorney for a telephone election was not made.

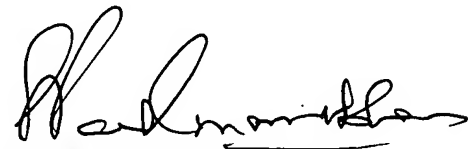

Art Unit: 1617

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Layla Soroush whose telephone number is (571)272-5008. The examiner can normally be reached on Monday through Friday from 8:30 a.m. to 5:00 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sreenivasan Padmanabhan, can be reached on (571) 272-0629. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
